Critical Perspectives On Minors Playing High-Contact Sports (Analyzing The Issues)

Synopsis

Playing team sports has many benefits, and yet high-contact sports such as football and rugby have also been linked to serious injuries, including concussions, and a higher risk of dementia, depression, and Parkinsons disease. How can we weigh the potential benefits of contact sports with their potentially serious risks? This text provides primary source evidence from doctors, scientists, and experts in the field of sports medicine, as well as ordinary peoples viewpoints, in order to help students reach their own conclusions about the risks related to high-contact sports.
